Did You Know That Gum Disease Can Lead to Serious Medical Conditions?

**ALZHEIMER’S DISEASE**
Certain oral bacteria can travel to the brain, creating enzymes that can lead to memory loss, and eventually, Alzheimer’s. Ongoing management and treatment of gum disease is vital.

**DIABETES**
Nearly 95% of diabetics have gum disease which increases blood sugar and other related complications.

**SLEEP APNEA**
Left unmanaged, sleep apnea can lead to tooth decay, plaque, sores, gum inflammation and disease.

**ORAL CANCER**
Approximately 53,000 adults in the U.S. will be diagnosed with oral cancer annually. Early diagnosis and treatment is critical.

**CARDIOVASCULAR DISEASE & STROKE**
Bacteria that infects the gums may cause blood vessel inflammation and damage leading to blood clots, heart attack or stroke.

**CANCER**
Clinical studies show that certain oral bacteria may influence the onset of certain cancers including: Esophageal, Pancreatic, Colorectal, and others.
